Patent No. 5783383

GENERAL INFORMATION:
APPLICANT: Mocareki, Edward S. Jr.
TITLE OF INVENTION: LATENT TRANSCRIPTS AND PROMOTERS
TITLE OF INVENTION: OF CYTOMEGALOVIRUS
NUMBER OF SEQUENCES: 75
CORRESPONDENCE ADDRESS:
ADDRESSEE: Deblinger & Associates
STREET: 350 Cambridge Avenue, Suite 250
CITY: Palo Alto
STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMPUTER READABLE FORM:

Sequence 466, Application US/08292620A

Patent No. 583754.
GENERAL INFORMATION:
APPLICANT: Susan Grimm
APPLICANT: Dans McSwiggen
APPLICANT: Sean Sullivan
APPLICANT: Sean Sullivan
APPLICANT: Renach G. Draper
APPLICANT: Renach G. Draper
TITLE OF INVENTION: RIBOTYME TREATMENT OF
TITLE OF INVENTION: DISEASES OR CONDITIONS
APPLICANT: Sugan Grimm
APPLICANT: Dan T. Stinchcomb
APPLICANT: Dan T. Stinchcomb
APPLICANT: James McSwiggen
APPLICANT: Gean Sullivan
APPLICANT: Sean Sullivan
APPLICANT: Kenneth G. Draper
TITLE OF INVENTION: RIBOZYME RREATWENT OF
TITLE OF INVENTION: NUTRACELLULAR ADHESION
TITLE OF INVENTION: NOLECULE-1 (I-CAM-1)
NUMBER OF SEQUENCES: 2390
CORRESPENDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: Sulte 4700
CITY: Los Angeles

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gequence 7, Application US/09071845

Patent No. 6122967

GENERAL INFORMATION:
APPLICANT: Susan Grimm
APPLICANT: James MCSWiggen
APPLICANT: James MCSWiggen
APPLICANT: Sean Sullivan
APPLICANT: Kenneth G. Draper
ITILE OF INVENTION: RIBOZYME TREATMENT OF
ITILE OF INVENTION: DISEASES OR CONDITIONS
ITILE OF INVENTION: RELATED TO LEVELS OF
ITILE OF INVENTION: MOLECULE-1 (1-CAM-1)
NUMBER OF SEQUENCES: 2390
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: 633 Weet Fifth Street

Sequence 266, Application US/09081646

Patent No. 6333152

GENERAL INFORMATION:

APPLICANT: Kinzler, Kenneth

APPLICANT: Zhang, Lin

APPLICANT: Zhang, Lin

APPLICANT: Zhang, Lin

APPLICANT: Zhang, Will

TITLE OF INVENTION: Gene Expression Profiles in No. 6333152mal and

TITLE OF INVENTION: Cancer Cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 25, Application US/08988321B
Patent No. 6174868
GENERAL INPORMATION:
TILLE OF INVENTION:
TITLE OF INVENTION: Compositions And Methods For Treatment Of Hepatitis C V
NUMBER OF SEQUENCES: 37
CORRESPONDENCE ADDRESS:
ADDRESSEB: Law Offices of Jane Massey Licata
STREET: 66 East Main Street
CITY: Marlton
                                                                                                 APPLICANT: HANKLE, DAVIG R.
APPLICANT: PANKE, DAVIG R.

Sequence 68, Application US/08431412
Sequence 68, Application
TEREAL INFORMATION:
APPLICANT: Monitarion Tobalinori
APPLICANT: No. 5589360uhara, Masahiro
TITLE OF INVENTION: Polypeptide, DNA Fragment Encoding the
TITLE OF INVENTION: Producing the Same and Process for
TITLE OF INVENTION: Producing the Same
TITLE OF INVENTION: Producing the Same
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         us-ug-us-ys-lat.dc

US-08-547-214-17/c
Sequence 17, Application US/08547214
Patent No. 5871697
GENERAL INFORMATION:
APPLICANT: Rothberg, Jonathan
APPLICANT: Deem, Michael
APPLICANT: Simpson, John
TITLE OF INVENTION: Method for the Determination and
TITLE OF INVENTION: Sequencing
TITLE OF INVENTION: Sequencing
NUMBER OF SEQUENCES: 59
CORRESPONDENCES: Pennie and Edmonds
ADDRESSEE: Pennie and Edmonds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /product= "amino terminal addition"

j Sequence 68, Application US/08057971
j Patent No. 5679770
general INPORMATION:
APPLICANT: Manamorit, Toshinta, Masahiro
TITLE OF INVENTION: Polypeptide, DNA Fragment Encoding the
TITLE OF INVENTION: Same, Drug Composition Containing the Same and Process for
TITLE OF INVENTION: Producing the Same
NUMBER OF SEQUENCES: 81
CORRESPONDENCE ADDRESS:
J ADDRESSEE: Birch, Stewart, Kolasch & Birch
GTREET: P.O. Box 747
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /product= "amino terminal addition"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 130, Application US/09281418

Sequence 130, Application US/09281418

Patent No. 6297769

GENERAL INFORMATION:
APPLICAMT: Inoue, Takakazu

TITLE OF INVENTION: Method of Amplifying DNA Fragment, Apparatus for Amplifying DNA FITTLE OF INVENTION: agment, Method of Assaying Microorganisms, Method of Analyzing Mirrie OF INVENTION: niems and Method of Assaying Contaminant

TITLE OF INVENTION: niems and Method of Assaying Contaminant

TITLE OF INVENTION: niems and Method of Assaying Contaminant

TITLE OF INVENTION NUMBER: US/09/281,418

CURRENT APPLICATION NUMBER: US/09/281,418

EARLIER PILING DATE: 1999-03-31

EARLIER PILING DATE: 1999-03-31

SEALIER PILING DATE: 1999-03-16

SEQ ID NO 130
Sequence 17, Application US/09322617
Patent No. 6231812
GENERAL INFORMATION:
APPLICANT: Rothberg, Jonathan
APPLICANT: Simpson, John
TITLE OF INVENTION: Classification of DNA Sequences in a Sample Without
TITLE OF INVENTION: Sequencing
COURRESPONDENCES: 59
COURRESPONDENCES: 50
COURTER: INVENTION: Sequencing
MEDIUM TYPE: Ploppy disk
COMPUTER: INP PC COMPATA:
TITLE OF INVENTION NUMBER: US/09/322,617
FILING DATE:
TITLE OF TANKED PRESENTED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
